## 1.DETAILED ACTION

### *Election/Restriction*

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-19, drawn to a method measuring magnetic force, classified in class 324, subclass 244.
  - II. Claim 20, drawn to an apparatus for measuring impedance using voltage and time, classified in class 324, subclass 713.

3. The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Group II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the methods of claims 1 and 8 require an apparatus such as determining magnetic force data based on surface topography along the path or determining impedance information of the interface based upon first and second responses of a sensor which is different from that of claim 20 and the obvious use of claim 20 is different from

Art Unit: 2858

the methods of claim 1 or claim 8 because a processor determines an impedance based value of the interface by the phase shift and frequency of the ac voltage.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include the election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. This application contains claims directed to the following patentably distinct species of the claimed invention:

If Group I is selected, election of species is required:

A. The species to which claims 1-7 are drawn as described in the specification, summary of invention, page 4, third paragraph.

B. The species to which claims 8-19 are drawn as described in specification, summary of invention, page 4, second paragraph.

Art Unit: 2858

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 2858

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
